Research Title : *The Effect of a Novel Etchant Gel on Enamel-etch Characteristics and*
The Effect of a Novel Etchant Gel on Enamel-etch Characteristics and

Descriptipn : Purpose: The aim of this study was to evaluate the influence of a novel Microcid Etchant Gel® (Saremco) on enamel-composite shear bond strength (SBS) as compared to a traditional 35 % phosphoric acid etching gel (3M ESPE). The etching patterns and elemental compositions of the tested enamel surfaces were also assessed by scanning electron microscopy (SEM) and energy dispersive X-ray (EDX) spectrometric analysis.

Research Type : Thesis

Research Year : 2004
